Wrocław, Poland

Curriculum vitae, October 2026

Mert Ural

Full-stack developer. I build software you can talk to, and tools that show their work.

Third-year IT engineering student in Wrocław. Open to an internship or a junior role in the EU, on site or remote.

Experience

Mainway AI *founder, full-stack developer*

2026 – now

An AI phone agent for clinics and real-estate agencies that answers calls and books appointments in Turkish and English. Built solo, deployed on a live Turkish phone number and tested in real calls.

- **Real-time pipeline.** Streaming speech-to-text, Claude with GPT-4o and Gemini fallbacks, ElevenLabs speech sent sentence by sentence over WebSockets, and barge-in: it stops talking when the caller cuts in.
- **Telephony.** Twilio in Poland, NetGSM SIP through Asterisk in Turkey, and a semantic end-of-turn detector as an ONNX sidecar.
- **Production.** Node.js on PostgreSQL, a customer dashboard, Docker on Ubuntu behind nginx.

Stack Node.js, PostgreSQL, Docker, nginx, Twilio, Asterisk, Deepgram, ElevenLabs, Claude API

Freelance developer *two client deliveries*

Jun – Jul 2026

- **Trading-signal alerts.** A Node.js service that turns a crypto analyst's posts into structured trade setups with the Claude API, watches Binance live and alerts Telegram the moment a condition triggers. 57 tests.
- **Payment planning for a textile company.** An offline web app that imports ERP reports of 34,000 line items and assigns payment dates in bulk. 23 tests.

Stack Node.js, Telegram Bot API, Binance WebSocket, SheetJS

Selected work

brisk *open-source Windows cleaner*

Aug 2026 – now

Tells you why your PC is slow and never claims what it didn't measure. A deterministic rule engine shows the evidence for each finding and fixes it in one click: allowlist only, undoable, no telemetry. Days later it reads its changes back to check Windows kept them. 171 tests.

Stack C#, .NET 8, WPF, xUnit, GitHub Actions · merturl4576/brisk

Booksy TR *booking app for salons in Turkey*

In development, 2026

Booking for barbers, hairdressers, nail and massage salons: one app for customers, one for the shop, on a shared Supabase backend. The clickable prototype is done, with a calendar that flags first-time customers; now building the Expo app screen by screen.

Stack TypeScript, React Native, Expo, Supabase, Postgres

Red team agent *bug-bounty agent with a safety core*

In development, private

Wraps the open-source Strix engine in my own safety layer: a scope gate checks each target against the programme rules, and the sandbox reaches only allowlisted hosts.

- **RCE in LEANN**, a 13k-star vector database (CVSS 8.8). Maintainer-confirmed, CVE pending.
- **Unauthenticated access-control bug** in a WordPress plugin. Validated by Patchstack.

Stack Python, Docker, WSL2, Strix, SQLite

Also built: PyService, an ITSM platform (Django, GraphQL); unflat, an agent skill that adds depth to flat AI-made pages; a Kubernetes hardening analyzer; a rental-listing bot for Telegram.

Education

B.Eng. Information Technology
WSB Merito University, Wrocław
Oct 2024 – Feb 2028, third year

Grade average **4.79 / 5** in 2025–26. ML course project: a heart-disease classifier, 0.944 ROC-AUC.

Skills

Languages
Python, JavaScript, TypeScript, C#, SQL

Backend and web
Node.js, Express, Django, .NET 8, React, Next.js, WebSockets

Data and operations
PostgreSQL, Redis, Supabase, Docker, Linux, nginx, GitHub Actions

AI and speech
Claude, OpenAI, Gemini APIs, Deepgram, ElevenLabs, ONNX, scikit-learn

Telephony and testing
Twilio, Asterisk (SIP), xUnit, pytest, Playwright

Spoken languages

Turkish	native
English	B2, EF SET certified
Polish	everyday basics

Certificates

Software Engineering Job Simulation
JPMorgan Chase via Forage, Jan 2026

EF SET English, B2
Feb 2026, cert.efset.org/yGoZiB

Outside work

I make small games in Godot, among them a judge simulator in the spirit of Papers, Please.
